RECEIVED

Assistant Commissioner for Patents
Washington, D.C. 20231

Sir:

SUPPLEMENTAL REISSUE DECLARATION UNDER 37 C.F.R. § 1.175

We, David A. Russo, Ryan R. Dirkx, and Glenn P. Florczak, the named inventors of the above-identified patent, declare and state as follows:

1. We are the named inventors of U.S. Patent No. 5,401,305 issued March 28, 1995, ("the '305 patent") which relates to a gaseous composition.
2. During the Summer of 1995, we were initially informed that the claims in the '305 patent did not claim the entire scope of our invention. In other words, we have been informed and agree that the '305 patent is partially inoperative because the claims in the '305 patent claim less than what is disclosed in the specification thereof.
3. In particular, the claims of the '305 patent relate to a gaseous composition adapted to deposit at least a first layer of tin oxide and silicon oxide onto glass at a rate of deposition greater than about 350 Å/second. However, the specification of the '305 patent, as well as the specification of the application leading to the '305 patent, disclose

a broader gaseous composition. As reflected in the claims of the parent application and the amendments in the present application of October 18, 1995, November 27, 1996, September 11, 1998, February 12, 1999 and April 16, 1999, we believe we are entitled to claims covering a broader invention which relates to a gaseous mixture comprising at least one metal oxide precursor and an accelerant, a film comprising at least one metal oxide and an accelerant, and a layer comprising a mixture of at least one metal oxide and an accelerant deposited on a substrate. The subject matter of these claims was not truly pursued in the prosecution of the application leading to the '305 patent, and we believe this was based on a misunderstanding or error of the patent counsel for the assignee.

4. This misunderstanding or error, on information and belief, arose without any deceptive intention on our part, and unfortunately, was not recognized by us until pointed out by patent counsel, namely, Stanley A. Marcus.

5. We acknowledge our duty to disclose to the U.S. Patent and Trademark Office all information known to us which may be material to the patentability of the '305 patent.

6. We have reviewed and understand the contents of the original and reissue specifications, including the claims, as amended by any amendment, including the amendments of October 18, 1995, November 27, 1996, September 11, 1998, February 12, 1999 and April 6, 1999 in the present application.

7. We believe we are the inventors of the original '305 patent, as well as the claims set forth in the foregoing amendments for which we seek a reissue patent.

8. The reissue claims differ inter alia from those of the '305 patent in that the claims of the '305 patent only relate to a gaseous composition comprising a precursor of tin oxide, a precursor of silicon oxide of formula $R_mO_nSi_p$ and an accelerant selected from the group consisting of organic phosphites, organic borates, and water, and mixtures thereof, and a source of oxygen. The '305 patent claims do not specifically mention a mixture comprising at least one metal oxide and an accelerant, a coated layer comprising the mixture containing the at least one metal oxide and an accelerant, nor do they relate to a gaseous composition comprising at least one precursor of a metal oxide with an accelerant, as was specifically disclosed in the specification of the '305 patent, for instance, at column 4, lines 18-39, column 5, lines 20-45, column 5, lines 58-66, as well as the examples.

9. We hereby declare that all statements made herein of our own knowledge are true, and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under
